

# Molecular Pharmaceutics

## PhD Program

### Rotation Report Requirements

Before the end of the rotation, you must submit a Rotation Report in the format of either a Power Point presentation and/or a written 2 to 4 page rotation report to your Rotation Advisor. This report will also be submitted to the PHCEU Department Office as evidence of the completed rotation.

The content and details of the Rotation Report should be discussed beforehand with your Rotation Advisor and should reflect your understanding of the basic principles involved in the project. A rotation report/presentation should include:

1. a description of the basic background of the research area
2. a statement of the specific problem addressed in the project
3. a description of the experimental approach to the problem
4. a summary of experimental results, if any, and their analysis
5. Note: The emphasis should be on the explanation of the scientific problem and experimental approach rather than on obtaining a large body of results
